

# Line aligner rig

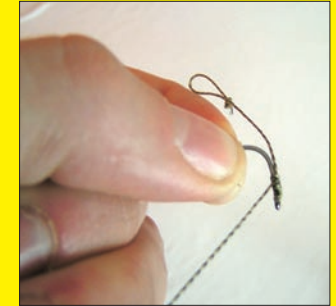

1. MAD Mystix, Razor Hook and shrink tube are the main components needed for this rig

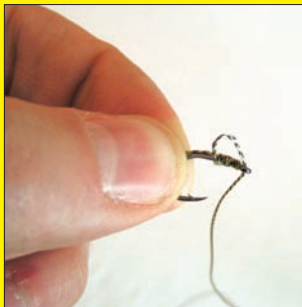

2. Cut a piece of Mystix rig link in the length of your own preference

3. Tie a little loop on one end of the braid

4. Connect the Razor hook to the braid with a knotless knot

5. Always make sure that the end of the rig line always goes through the eye of the hook from the outside and comes out on the side of the hook point

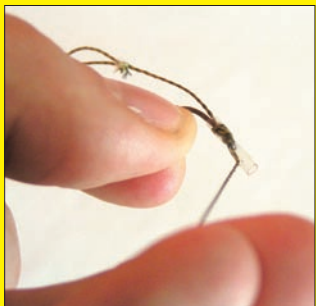

6. Cut a small piece of shrink tube

7. The most vital step for this rig; make a tiny hole in the tube with your needle just before the end

8. Pull the end of the rig link through the tiny hole and pull the hook towards the tube

9. Pull the eye of the hook into the shrink tube

10. Make sure that the line comes out of the tube on the side of the hook point and that the hair leaves the tube opposite of the hook point

11. Now tie the swivel to the hook link with a knot that you trust most
